Sole Source Letter

To Whom it May Concern:

Mystaire, Inc. manufactures a full line of ductless workstations, laminar flow hoods, and application-specific enclosures. Mystaire, Inc. is the sole manufacturer of the Latitude™ Series C Filtered Hood.

The Latitude™ Series C Filtered Hood combines maximum user accessibility with redundant Saf-T-Zone™ HEPA filtration technology for added safety and easy maintenance. Designed with rear wall pre-filters and HEPA filtration, this product pulls potentially harmful particulate away from the operator's breathing zone in an even, horizontal airflow path. By combining Saf-T-Zone filtration technology and horizontal airflow patterns, the Latitude increases the capture capability for both particulate and fumes. Additionally, a secondary safety HEPA filter provides containment during replacement of the main pre-filter or HEPA filter.

Every Latitude™ Series C Filtered Hood comes equipped with the EverSafe™ Automatic Safety Controller and has been ASHRAE 110 tested. In compliance with OSHA and ANSI/AIHA standards, EverSafe constantly monitors the complete filtration system, displays airflow at the face of the hood and alerts the end user if airflow or filter issues arise during operation. Incorporating audible and visual alarms, EverSafe's advanced electronic sensors remove the guesswork associated with proper fume hood function.

Waste disposal in all Latitude™ Series C Filtered Hood is managed with a disposal port on the right side of the chamber. This waste port is designed to allow for the attachment of a waste or biohazard bag and aides in reducing the potential for exposure during the disposal process. The operator can use the waste disposal port to remove contaminated weighing vessels and examination gloves from the work area.

As you can see, Mystaire, Inc. is the sole source provider and manufacturer of the Latitude™ Series C Filtered Hood. We manufacture and ship fully assembled out of Creedmoor, NC.

Any questions may be directed to 877-328-3912.

Sincerely,

Alex Yancey
